**“It’s a long way from the field to your trolley”**

**“Introducing Safeguard Fruit & Veggie Wash”**

**“Up 100 times more effective than water”**

Fresh fruit and vegetables are vital to your family’s health and well-being. They provide a major daily source of vitamins and minerals for people of all ages.

A lot of things can happen to fresh produce before it ends up in your shopping trolley. From growing, harvesting, to transport, to placement in your local supermarket, or even prior handling by another customer, there are many opportunities for your fruit or vegetables to be contaminated in some way.

Most countries, including Australia, have very high standards and strict regulations, but at some point along the way your piece of fruit or vegetable has the potential to pick up something that could be harmful to your family’s health. This includes bacteria, dirt, waxes, chemical and pesticide residues.

Increased importing of goods from overseas means the chances of contamination are even greater. Longer travelling times and extra handling contribute to the problem, as do the variations in food safety controls and quality standards in different countries.

Safeguard Fruit & Veggie Wash has been developed in Australia. This new product safely removes up to 100 times more contaminants than rinsing with water alone, leaving fruit & veggies as nature intended – clean and safe to eat for your family.

Safeguard Fruit & Veggie Wash is made from 100% organic and natural ingredients, has no after taste, and is environmentally friendly and biodegradable.

Using the pump action simply put a few drops of Safeguard in half a sink full of fresh water to clean your latest purchases. You can also make up your own diluted spray to use on individual pieces of fruit or vegetables.

Safeguard Fruit & Veggie Wash is a highly concentrated formula in a 750ml bottle, each bottle provides over 50 washes - approximately 1 months use for a family. The product does not require refrigeration and has a long shelf life.

A lot of people take the precaution of rinsing their fruit and vegetables in water, unaware that this is not enough to remove potentially harmful residues.

Independent laboratories that are certified by the National Association of Testing Authorities (NATA) have extensively tested Safeguard Fruit & Veggie Wash. The tests concluded that Safeguard Fruit & Veggie Wash successfully removes up to 100 times more contaminants than water alone.

Good Environmental Choice Australia (GECA) has certified Safeguard Fruit & Veggie Wash. The GECA label notifies consumers that this is an environmentally friendly ‘green’ product.

In fact, using Safeguard will help you save on water consumption (see instructions for use).
